

Getting Eagle Seven's infrastructure lead on the phone

Account entry plan for Spencer Refer | Prepared Thursday, October 1, 2026 | Sources: HubSpot, Lemlist, ZoomInfo, Apollo

80 Bandwidth intent score, Sep 26 (ZoomInfo)	1 block from 550 W Jackson to the Crosstown ring	~105 employees: one small infra team decides	0 of 5 replies after 2 emails and LinkedIn invites
STAGE Tier A prospect. No deal in HubSpot.	RUNNING NOW CTF ABM - Eagle Seven (Wave A), 5 leads, step 8 (call task)	LAST TOUCH Sep 23: email 2 'the part of your path map you can't see' to all 5	NEXT STEP Mon Oct 5: live call to Michael Wojciechowski

Bottom line

Eagle Seven is a 105-person Chicago proprietary trading firm sitting **within a block of the Crosstown ring** at 550 W Jackson, and ZoomInfo shows it researching Bandwidth (score 80) on Sep 26. The whole infrastructure function is five people, all already in your Wave A sequence, and none has replied to email or accepted LinkedIn. Email is not working here. **Michael Wojciechowski (Director of Infrastructure)** came from IMC, where he was Head of Trading Solutions; he thinks in microseconds and exchange paths, not circuits. The plan switches the channel: a live call this Monday, then a one-page building-specific note, rather than a third generic email.

What Eagle Seven is, in one analogy

A liquidity provider is like a corner store that promises it will always have milk on the shelf. If the delivery truck is late, it loses the sale to the store down the street. Eagle Seven's 'truck' is the fiber between its office, its racks and the exchanges. Your pitch is a second road to the store that doesn't share a single lane with the first.

Signals worth citing

Signal	Source	So what for the opener
Bandwidth intent 80 (audience D), Sep 26, 2026	ZoomInfo intent	Small audience, so likely one or two people on the infra team. Timely, and matches the briefing's #2 priority.
550 W Jackson Blvd Ste 1400 is within a block of the Crosstown ring	Trigger Scout Briefing, Oct 1	Short lateral, fast install. Lead with the building, not the network.
Michael Wojciechowski was Head of Trading Solutions at IMC Chicago before Eagle Seven	Apollo	He has bought low-latency connectivity before at a larger shop. Talk path diversity and build time, not 'dark fiber 101'.
No news or scoops in the last 10 months	ZoomInfo	Quiet firm. Don't invent a trigger; the intent spike and the building are enough.
2 locations listed (ZoomInfo)	ZoomInfo	Likely office plus a colo presence. Ask where the second site is; that's the path you'd diversify.

Check first

Apollo has no deliverable email for Wojciechowski ('unavailable'), yet the Lemlist emails to mwojciechowski@eagleseven.com did not bounce. Treat email as unconfirmed and lead with the phone (773 number in Lemlist).

Work already in motion

When	Channel / campaign	What happened	Read
Sep 9-10	Wave A, step 1	LinkedIn profile visits to all 5	Done
Sep 10-11	Wave A, email 1	'Route diversity after the Zayo + Crown Castle consolidation'	No replies
Sep 14-15	Wave A, LinkedIn invite	Invites to all 5	None accepted
Sep 21	Wave A, LinkedIn follow	Followed 4; Wojciechowski follow skipped	-
Sep 23	Wave A, email 2	'The part of your path map you can't see'	No replies
Sep 28	Wave A, like last post	None of the 5 post on LinkedIn	LinkedIn is a dead channel here
Sep 30	CTF ENT Leaders/Practitioners	Duplicate enrollments removed	Only in Wave A now

Who to reach, in order

Contact	Title (source)	Where	Why they matter	Status / email
Michael Wojciechowski	Director of Infrastructure (HubSpot, Apollo). Ex-IMC Head of Trading Solutions.	Chicago	Owns the decision. Has bought trading connectivity before.	Wave A, no reply. Phone in Lemlist; email unconfirmed
Rodney Banal	Senior Network Engineer since 2014 (Apollo). Ex-UBS.	Chicago	Longest-tenured network engineer; knows every existing circuit.	Wave A, no reply. rbanal@eagleseven.com
Sebastian Cyran	Senior Network Engineer (HubSpot)	Chicago	Second senior engineer; good for a technical follow-up.	Wave A, no reply
Colin Smith	Data Center Engineer (HubSpot)	Chicago	Runs the racks; knows where the second site and cross-connects are.	Wave A, no reply
Greg Luka	Technology Operations Engineer since 2010 (Apollo)	Westchester, IL	Not in HubSpot or Lemlist. Long-tenured ops person; useful if the network team stays silent.	Not contacted. gluka@eagleseven.com (verified)

Not worth chasing for this goal

Josh Melchiori (Network Engineer) stays in Wave A but gets no extra touches. Mitchell (Technology Project Manager) and James (IT Engineer) found in Apollo are too junior for this decision.

How the access path should run

Messages, by contact

Pause Wojciechowski and Banal in Wave A before sending these, so nobody gets a sequence email and a personal note in the same week.

1. Michael Wojciechowski Director of Infrastructure

Why them: Decision-maker; email isn't landing.

Channel: Phone, Mon Oct 5, 8:15-8:45am CT (before the open is busy) and Tue 4:15pm CT | Subject: Call talk track

Michael, Spencer at Crosstown Fiber, ten seconds on why I'm calling: our underground ring runs about a block from 550 West Jackson. You came from IMC, so you know what a second path is worth on a bad day. Is Eagle Seven's route out of that building something you're happy with, or something you'd look at if the build was short?

2. Michael Wojciechowski Director of Infrastructure

Why them: Voicemail follow-up, so the call isn't wasted.

Channel: Email right after the call | Subject: 550 W Jackson: a second way out

Michael, I just left you a voicemail. Short version: Crosstown owns underground fiber about a block from your office. If your current paths out of 550 W Jackson share conduit anywhere, that's the gap we close. Worth 15 minutes to look at a map of the block?

3. Rodney Banal Senior Network Engineer

Why them: If Michael is unreachable by Oct 9, go to the engineer who knows the circuits.

Channel: Phone, then email, Mon Oct 12 | Subject: Quick one on your laterals

Rodney, quick technical question. Do Eagle Seven's two carrier laterals into 550 W Jackson enter the building on different sides, or share a riser? I own fiber on that block and I keep finding 'diverse' paths that meet in the same manhole. Happy to send you our map of the block either way.

The plan

When	Move	Notes
Fri Oct 2	Pause Wojciechowski and Banal in Wave A. Leave Cyran, Smith, Melchiori running.	Avoids double-touching the two people you'll call.
Mon Oct 5	Call Michael Wojciechowski (talk track). Voicemail plus follow-up email if no answer.	Matches the briefing's recommendation: call task, reference diverse paths out of W Jackson.
Tue Oct 6	Second call attempt at 4:15pm CT.	Post-close window.
Thu Oct 8	Prepare a one-page block map: 550 W Jackson, the ring, nearest vault.	Attach to the next email.
Mon Oct 12	If no answer from Michael: call then email Rodney Banal.	Engineer-to-engineer question.
Wed Oct 14	Email Michael the block map: 'Here's the second way out I mentioned.'	Gives him something he can forward.
Mon Oct 19	If still silent: email Greg Luka asking who owns carrier decisions.	Low-key, one line.
Week of Oct 26	Goal: 20-minute block-map review with Michael and Rodney.	Bring the KMZ.

What progress looks like (for management)

By	Milestone	How we will know
Oct 9	Live conversation with Wojciechowski	Call logged in HubSpot
Oct 30	Block-map review held	Meeting logged; deal created at Appointment Scheduled

Guardrails

- No third generic email. The sequence has had two chances; switch to the phone.
- Keep it local: the building, the block, the second path. No pricing until there's a map review.
- Credits used: 3 Apollo person enrichments; ZoomInfo company and signals for 1 company.
