

Turning OCC's conduit reply into a route review

Account entry plan for Spencer Refer | Prepared Thursday, October 1, 2026 | Sources: HubSpot, Lemlist, ZoomInfo, Apollo, public web

100 Dark Fiber intent score, audience A (ZoomInfo, Sep 12)	1 reply Michael Dunne answered on LinkedIn, Sep 20	2 blocks from 125 S Franklin HQ to the Crosstown ring	0 contacts yet with the Director of Network Engineering
STAGE Open deal: Appointment Scheduled (HubSpot, updated Sep 22). No meeting is logged yet.	RUNNING NOW CTF ABM - Options Clearing Corp (Wave B), 5 leads, step 7 of the sequence	LAST TOUCH Sep 30: LinkedIn follow-up to Michael Dunne offering a custom route map	NEXT STEP Fri Oct 2: check Dunne reply; Mon Oct 5: email Charles Marsh

Bottom line

OCC is the warmest account on the book and the only open deal. Michael Dunne, who owns network architecture, told you on Sep 20 that OCC **verifies diversity at the conduit level because it has been burned by carrier leasing and shared conduit**. That is your exact pitch, said back to you by the buyer. Two weeks earlier, ZoomInfo logged OCC at a perfect 100 on Dark Fiber intent. The gap: the deal is marked Appointment Scheduled but no meeting exists, and the one person who likely signs network contracts, **Charles Marsh (Director, Network Engineering)**, has never been contacted. The plan is to convert Dunne's reply into a 30-minute route review using the KMZ overlay, and bring Marsh in through Dunne rather than around him.

What OCC is, in one analogy

OCC is the referee that stands behind every listed options trade in the US. If a referee's whistle fails, the game stops, so regulators treat OCC as a systemically important utility. For a network team, that means they don't buy circuits the way a startup buys bandwidth; they buy proof that two paths can't fail together. Your fiber map is the proof, not the product.

Signals worth citing

Signal	Source	So what for the opener
Dark Fiber intent 100 (audience A) and Networking/Telecom intent 100, Sep 12, 2026	ZoomInfo intent	Top possible score with the largest audience. Someone at OCC was actively researching dark fiber in mid-September, the same week your sequence started.
Data Center intent 91 (Sep 12) and Networking Solutions 77 (Sep 26)	ZoomInfo intent	Interest is sustained across two weeks, not a one-day blip. Reference sites, not prices.
Michael Dunne: 'We did conduit level. We have had issues with carrier leasing and shared conduit in the past.'	Lemlist LinkedIn reply, Sep 20	Pain is confirmed in their words. Quote it back when asking for the meeting.
Matt Rathbun named CTO, May 2026 (was Chief Security Officer; ex-Two Sigma, Microsoft Azure)	Apollo	New CTO from a security background. Resilience and physical-path proof map to his priorities.
Madhuri Ganne promoted to Managing Director, Systems and Infrastructure, May 2026	Apollo	New infrastructure owner above the network team. Likely approves spend.
Data center engineering lead (Luis Rodriguez) and a network manager (Chadwick Compton) are based in Dallas/Aubrey, TX	Apollo	OCC runs a second site in Texas. Chicago is one end of their inter-site path; ask how the Chicago side leaves the building.
Clearing deals with MIAX futures (May 20) and MIAX FCM membership (Sep 24); MX2 Options added as 19th exchange (Sep 15)	ZoomInfo news and scoop	More venues means more connectivity to exchanges and members. A natural 'what changed' opener.
IT and Engineering open roles at a 6-month high (Sep 19)	ZoomInfo scoop	Team is growing and modernizing (AWS, Kubernetes, Terraform). Expect cloud on-ramp and hybrid paths to matter.

Check first

The HubSpot deal says Appointment Scheduled, but no meeting is on the record. Either log the meeting or move the stage back so management's pipeline view is accurate. Apollo also shows OCC was imported into Crosstown's Salesforce on Sep 11 with a CRM owner assigned; confirm that owner is you before the Salesforce upload.

Data notes

HubSpot has Parashar Singh twice (psingh@ and psingh2@theooc.com). ZoomInfo lists 3,205 employees; Apollo lists about 1,200. Use 'about 1,200' only if you need a number; it matches LinkedIn more closely.

Work already in motion

Every touch below is logged in HubSpot (via the Lemlist sync) and reflects the current Wave B sequence. Nothing has been sent outside the campaign yet.

When	Channel / campaign	What happened	Read
Sep 11-14	Lemlist Wave B, step 1	LinkedIn profile visits to all 5 leads	Warm-up done
Sep 14-15	Lemlist Wave B, email 1	'Route diversity after the Zayo + Crown Castle consolidation' to Singh, Negron, Argudin, Welsh, Dunne	No email replies
Sep 16-17	Lemlist Wave B, step 3	LinkedIn invites to all 5; Dunne accepted Sep 17	1 of 5 connected
Sep 18-20	LinkedIn DM	Asked Dunne whether diversity was verified at conduit level or by carrier attestation. He replied Sep 20: conduit level, after past shared-conduit problems.	Pain confirmed. Lead auto-paused.
Sep 22	LinkedIn DM (manual)	Offered a 15-min look at where current paths really run	No reply yet
Sep 21-24	Lemlist Wave B, email 2	'The part of your path map you can't see' to the other 4 leads; LinkedIn follows	No replies
Sep 30	LinkedIn DM (manual) + HubSpot note	Bump to Dunne offering a custom route map of Crosstown fiber against OCC's Chicago sites, with booking link	Next check Fri Oct 2
Sep 30	CTF ENT Leaders / Practitioners	Duplicate enrollments removed; Mamdouh Oueslati call task skipped	Clean: OCC is only in Wave B now

Who to reach, in order

Emails below are verified by Apollo or present in HubSpot. Charles Marsh is the biggest gap: he leads network engineering and has had no touch from us.

Contact	Title (source)	Where	Why they matter	Status / email
Michael Dunne	Principal, Network Infrastructure Architecture (HubSpot, Lemlist)	Chicago	Replied once. Owns the design and already shares the conduit concern. The champion to build around.	Engaged on LinkedIn; lead paused. mdunne@theocc.com
Charles Marsh	Director, Network Engineering since Jun 2024 (Apollo). Ex-StoneX, Meta, Hyatt.	Chicago	Most likely owner of carrier and fiber contracts. Ex-StoneX means he knows trading-grade latency and diversity.	Not contacted. cmarsh@theocc.com (verified)
Paul Negron	Executive Principal Network Engineer (HubSpot)	n/a	Senior hands-on engineer; would review any route map.	Wave B, 2 emails, no reply. pnegron@theocc.com
Madhuri Ganne	Managing Director, Systems and Infrastructure, since May 2026 (Apollo)	Hoffman Estates, IL	New infrastructure leader; approves budget. Do not cold-pitch; bring in once Dunne or Marsh is engaged.	Not contacted. mchalichema@theocc.com (verified)
Rufus Arulrajah / Chadwick Compton	Managers, Network Engineering (Apollo)	Joliet, IL / Aubrey, TX	Run day-to-day circuits. Compton covers the Texas side; useful for the inter-site path question.	Not contacted. Verified emails in Apollo
Luis Rodriguez	Lead Associate Principal, Data Center Engineering (Apollo)	Dallas, TX	Knows where OCC's racks and meet-me rooms are.	Not contacted. lrodriguez@theocc.com (verified)
Parashar Singh	Director, Infrastructure Innovation and Automation (HubSpot)	Chicago	Automation leader; adjacent, not the buyer. Briefing flagged him after the Sep 26 intent spike.	Wave B, 2 emails, no reply
Matt Rathbun	CTO since May 2026 (Apollo)	Chicago	Executive air cover only, after a technical meeting exists.	Not contacted. Hold.

Not worth chasing for this goal

Fetari Welsh (Head of IT Governance) and Andy Meyer (Executive Director, IT Risk Margins) are in governance and risk, not network buying; keep Welsh in Wave B but don't add touches. Mamdouh Oueslati (IT Director) and Heather Mosny (Office of the CIO) are too far from the network team. Steven Argudin, Syed Khan, Rob Leahy, Mike Schwartz and Dieudonne Nembeana are engineers who will see the map once Dunne or Marsh shares it; no separate outreach.

How the access path should run

Messages, by contact

Keep each under 90 words, one question, sent from your own inbox or LinkedIn, one at a time. Do not re-enroll anyone; Dunne is paused in Wave B, so all of these go out by hand.

1. Michael Dunne Principal, Network Infrastructure Architecture

Why them: Already told you conduit-level verification matters to OCC. Make saying yes easy.

Channel: LinkedIn DM (existing thread), Fri Oct 2 if no reply | Subject: n/a (thread reply)

Michael, one more idea and then I'll stop nudging. You said OCC verifies at the conduit level because of past shared-conduit problems. I can send a KMZ of our Chicago ring before we ever talk, so you can check it against your own maps. If anything overlaps, you'll know in five minutes. Want me to send it, and should Charles Marsh see it too?

2. Charles Marsh Director, Network Engineering

Why them: The likely decision-maker, and untouched. Lead with Dunne's point, not a pitch.

Channel: Email, Mon Oct 5 (after Dunne gets a chance to reply) | Subject: Conduit-level diversity at 125 S Franklin

Charles, I've been trading notes with Michael Dunne on how OCC verifies path diversity at the conduit level. Crosstown owns an underground dark fiber ring that runs about two blocks from 125 S Franklin, and we map every conduit we're in. Would a 30-minute review of our routes against your current Chicago paths be useful for your team this month?

3. Paul Negron Executive Principal Network Engineer

Why them: Hands-on reviewer. Ask a technical question he can answer in one line.

Channel: Email reply in the Wave B thread, Wed Oct 7 | Subject: Re: the part of your path map you can't see

Paul, quick one. When OCC adds a new venue or member connection in Chicago, does it ride your existing laterals out of Franklin Street, or does each one get its own path? I'm asking because the new MIAX and MX2 relationships look like more Chicago cross-connect traffic, and that's where shared conduit tends to creep in.

4. Chadwick Compton Manager, Network Engineering (Texas)

Why them: Covers the other end of OCC's inter-site path. A different angle from the Chicago team.

Channel: Email, Mon Oct 12 | Subject: The Chicago end of your Texas paths

Chadwick, I work with a Chicago dark fiber owner. Between OCC's Chicago and Texas sites, the long-haul is usually well diversified; the weak spot is often the first mile out of each building. Is that something your team looks at, or does it sit with the Chicago group?

5. Madhuri Ganne Managing Director, Systems and Infrastructure

Why them: Budget owner, new in role. Use only after Dunne or Marsh has engaged, as a short FYI.

Channel: Email, Week 4, only with a meeting on the books | Subject: Route review with your network team

Madhuri, congratulations on the new role. I'm meeting with [Dunne/Marsh] to review Crosstown's Chicago conduit routes against OCC's current paths. Happy to share what we find with you directly if that's useful for your infrastructure planning.

The plan (dated)

When	Move	Notes
Thu Oct 1	Log a HubSpot task: 'Confirm deal stage'. Either schedule the meeting or move the deal back to Qualified.	Keeps the pipeline honest before management reviews it.
Fri Oct 2	Check for a Dunne reply. If none, send message 1 (KMZ offer) in the LinkedIn thread.	Matches the next-check date you set in HubSpot on Sep 30.
Mon Oct 5	Email Charles Marsh (message 2). Add him to HubSpot, owner Spencer, tagged OCC-manual.	Do not add him to Lemlist; this is a hand-run thread.
Wed Oct 7	Reply to Paul Negron in the Wave B thread (message 3).	Pause Negron's remaining Wave B steps first so he doesn't get two messages in one week.
Fri Oct 9	Prepare the KMZ overlay: Crosstown ring vs 125 S Franklin and known OCC sites.	Have it ready to send the moment anyone says yes.
Mon Oct 12	Email Chadwick Compton (message 4).	Texas angle; staggered so the Chicago team doesn't compare notes the same day.
Week of Oct 19	Goal: 30-min route review with Dunne and Marsh. Bring Tony Marcos (Director of Sales) if Marsh attends.	Agenda: their current Chicago laterals, our conduit map, where they overlap.

When	Move	Notes
Week of Oct 26	Follow-up: send a written summary of overlaps found and a proposed diverse path. Then FYI to Madhuri Ganne (message 5).	Executive touch only with something concrete.
Nov 2+	If silent: one LinkedIn connection request to Marsh without a note; final email to Dunne with the KMZ attached.	Then let Wave B finish and recycle OCC in January.

What progress looks like (for management)

By	Milestone	How we will know
Oct 9	Dunne or Marsh replies, or KMZ is requested	Reply logged in HubSpot; deal note updated
Oct 23	Route review meeting held	HubSpot meeting logged; deal stays at Appointment Scheduled honestly
Nov 6	Path design or quote request	Deal moves to Qualified to Buy or Proposal

Guardrails

- OCC is in one campaign only (Wave B). Do not re-enroll anyone in CTF ENT Leaders or Practitioners; those duplicates were removed Sep 30.
- No pricing in writing until a route review has happened. Lead with the map, not dark fiber rates.
- Quote Dunne's words only to Dunne and Marsh, and only as 'Michael mentioned'; never to executives.
- Merge the duplicate Parashar Singh record in HubSpot before the Salesforce upload.
- Credits used for this plan: 8 Apollo person enrichments, 1 Apollo organization enrichment, ZoomInfo signals and company enrichment for 1 company.
